Name: Brandon Bryant

Steps to completion:

- 1) Brute force the hash passwords and then store the passwords
- 2) Extract the data from each password protected zip file using the found passwords
- 3) Perform steganalysis using the python console to be sure which RGB channel the message has been stegged on (Guess and Check)
 - 4) Using the Image module from PIL open the image
- 5) Split the RGB channels into three different variables: Red, Green, Blue (this breaks the tuple into a one-D array)
 - 6) AND each pixel with 1 to perform LSB extraction.
 - 7) Pair each eight bytes and convert it into a char and print out the results
